I. INTRODUCTION

A. RISK FACTORS

■ Standard Risk Factors:

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down depending on the various factors and forces affecting the capital markets and money markets.
- Past performance of the Sponsors and their affiliates / AMC / Mutual Fund does not guarantee future performance of the Scheme of the Mutual Fund.
- The name of the Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The Sponsors are not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs.1 lakh each made by them towards setting up the Fund.
- The present Scheme is not a guaranteed or assured return scheme.

■ Scheme Specific Risk Factors

Some of the specific risk factors related to the Scheme include, but are not limited to the following:

(i) Risk factors associated with Capital Protection Orientation

- The Scheme is “oriented towards protection of capital” and “not with guaranteed returns”. The Scheme does not guarantee any returns. The orientation towards protection of capital originates from the structure of the Portfolio of the Scheme and not from any Bank guarantee, Insurance Cover etc. There is no assurance that the structure would provide the necessary protection of capital.
- The ability of the portfolio to meet capital protection on maturity to the investors can be impacted in certain circumstances including changes in government policies, interest rate movements in the market, credit defaults by bonds, expenses, reinvestment risk and risk associated with trading volumes, liquidity and settlement systems in equity and debt markets. Accordingly, investors may lose part or all of their investment (including original amount invested) in the Scheme. No guarantee or assurance, express or implied, is given that investors will receive the capital protected value at maturity or any other returns.
- ICRA ratings should not be treated as recommendation to buy, sell or hold the rated debt instruments. Ratings should not be construed as an indication of expected returns, prospective performance of the Scheme, NAV or of volatility in its returns. The ICRA ratings are subject to a process of surveillance which may lead to a revision in ratings. ICRA reserves the right to suspend, withdraw or revise its ratings at any time on the basis of any new information or unavailability of information or any other circumstances which ICRA believes may have an impact on the rating assigned by it. Investors may visit the website (www.icra.in) or contact any ICRA office for the latest information on ICRA ratings outstanding. ICRA shall not be liable for any losses incurred by users from any use of the ratings.
- The initial investment mix of the scheme is based upon

assumptions on collections, pre-determined initial and running expenses and yield on the securities in the fixed income portfolio.

- The Scheme could face reinvestment risks on interim interest cash flows, if the yield on such reinvestments is lower than the yield on the initial investments.

(ii) Risk factors associated with investing in equities and equity related instruments

- Equity shares and equity related instruments are volatile and prone to price fluctuations on a daily basis. Investments in equity shares and equity related instruments involve a degree of risk and investors should not invest in the Scheme unless they can afford to take the risks.
- Scheme’s performance may differ from the benchmark index to the extent of the investments held in the equity segment, as per the investment pattern indicated under normal circumstances.

(iii) Risk factors associated with investing in Fixed Income Securities

- The Net Asset Value (NAV) of the respective Plan(s) under the Scheme, to the extent invested in Debt and Money Market instruments, will be affected by changes in the general level of interest rates. The NAV of the respective Plan(s) is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- Money market instruments, while fairly liquid, lack a well developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is finally sold.
- Investment in Debt instruments are subject to the risk of an issuer’s inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer. Changes in financial conditions of an issuer, changes in economic and political conditions in general, or changes in economic or and political conditions specific to an issuer, all of which are factors that may have an adverse impact on an issuer’s credit quality and security values.
- Government securities where a fixed return is offered run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. The new level of interest rate is determined by the rates at which government raises new money and/ or the price levels at which the market is already dealing in existing securities. The price-risk is not unique to Government Securities. It exists for all fixed income securities. However, Government Securities are unique in the sense that their credit risk generally remains zero. Therefore, their prices are influenced only by movement in interest rates in the financial system.
- Different types of fixed income securities in which the Scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the Scheme risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher level of risk than Government securities. Further even among corporate bonds, AAA rated bonds are comparatively less risky than AA rated bonds.
- As zero coupon securities do not provide periodic interest payments to the holder of the security, these securities are

more sensitive to changes in interest rates. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer attractive yields. This may increase the risk of the portfolio. Zero coupon or deep discount bonds are debt obligations that do not entitle the holder to any periodic payment of interest prior to maturity or a specified date when the securities begin paying current interest and therefore, are generally issued and traded at a discount to their face values. The discount depends on the time remaining until maturity or the date when securities begin paying current interest. It also varies depending on the prevailing interest rates, liquidity of the security and the perceived credit risk of the Issuer. The market prices of zero coupon securities are generally more volatile than the market prices of securities that pay interest periodically.

Apart from normal credit risk, zero coupon bonds carry an additional risk, unlike bonds that pay interest throughout the period to maturity, zero coupon instruments/deferred interest bonds typically would not realise any cash until maturity. If the issuer defaults, the respective Plan(s) may not obtain any return on its investment.

- Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. The Scheme may choose to invest in unlisted securities that offer attractive yields. This may increase the risk of the portfolio.
- Prepayment Risk: Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.
- Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
- Investments in money market instruments involve credit risk commensurate with short term rating of the issuers.

(iv) General Risk Factors

- Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. The NAV of the Units of the Scheme can go up or down because of various factors that affect the capital markets in general.
- At times, due to the forces and factors affecting the capital market, the Scheme may not be able to invest in securities falling within its investment objective resulting in holding the monies collected by it in cash or cash equivalent or invest the same in other permissible securities / investments amounting to substantial reduction in the earning capability of the Scheme. The Scheme may retain certain investments in cash or cash equivalents for its day-to-day liquidity requirements.
- Performance of the Scheme may be affected by political, social, and economic developments, which may include

changes in government policies, diplomatic conditions, and taxation policies.

- While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges and may lead to the Scheme incurring losses till the security is finally sold.
- Investment strategy to be adopted by the Scheme may carry the risk of significant variance between the portfolio allocation of the Scheme and the Benchmark particularly over a short to medium term period.

(v) Risk factors associated with investing in Foreign Securities

• Currency Risk:

Moving from Indian Rupee (INR) to any other currency entails currency risk. To the extent that the assets of the Scheme will be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by changes in the value of certain foreign currencies relative to the Indian Rupee.

• Interest Rate Risk:

The pace and movement of interest rate cycles of various countries, though loosely co-related, can differ significantly. Hence by investing in securities of countries other than India, the Scheme stand exposed to their interest rate cycles.

• Credit Risk:

Investments in Foreign Debt Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer. This is substantially reduced since the SEBI (MF) Regulations stipulate investments only in debt instruments with rating not below investment grade by accredited/registered credit rating agency.

• Country Risk:

The Country risk arises from the inability of a country, to meet its financial obligations. It is the risk encompassing economic, social and political conditions in a foreign country, which might adversely affect foreign investors' financial interests. In addition, country risks would include events such as introduction of extraordinary exchange controls, economic deterioration, bi-lateral conflict leading to immobilisation of the overseas financial assets and the prevalent tax laws of the respective jurisdiction for execution of trades or otherwise.

To manage risks associated with foreign currency and interest rate exposure, the Mutual Fund may use derivatives for efficient portfolio management including hedging and in accordance with conditions as may be stipulated by SEBI / RBI from time to time.

(vi) Risk factors associated with investing in Derivatives

- The AMC, on behalf of the Scheme may use various derivative products, from time to time, in an attempt to protect the value of the portfolio and enhance Unit holders' interest. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Other risks include the risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate

losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

- The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.
- Credit Risk: The credit risk in derivative transaction is the risk that the counter party will default on its obligations and is generally low, as there is no exchange of principal amounts in a derivative transaction.
- Illiquidity risk: This is the risk that a derivative cannot be sold or purchased quickly enough at a fair price, due to lack of liquidity in the market.

(vii) Risk factors associated with Securities Lending

As with other modes of extensions of credit, there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary.

(viii) Risk Factors associated with Market Trading

- Although Units of the respective Plan(s) as mentioned in this Scheme Information Document are to be listed on the Exchange(s), there can be no assurance that an active secondary market will develop or be maintained.
- Trading in Units of the respective Plan(s) on the Exchange(s) may be halted because of market conditions or for reasons that in view of Exchange Authorities or SEBI, trading in Units of the respective Plan(s) is not advisable. In addition, trading in Units of the Scheme is subject to trading halts caused by extraordinary market volatility and pursuant to Exchange and SEBI 'circuit filter' rules. There can be no assurance that the requirements of Exchange necessary to maintain the listing of Units of the respective Plan(s) will continue to be met or will remain unchanged.
- Any changes in trading regulations by the Exchange(s) or SEBI may inter-alia result in wider premium/ discount to NAV.
- The Units of the respective Plan(s) may trade above or below their NAV. The NAV of the respective Plan(s) will fluctuate with changes in the market value of Plan's holdings.
- The trading prices of Units of the respective Plan(s) will fluctuate in accordance with changes in their NAV as well as market supply and demand for the Units of the respective Plan(s).
- The Units will be issued in demat form through depositories. The records of the depository are final with respect to the number of Units available to the credit of Unit holder. Settlement of trades, repurchase of Units by the Mutual Fund on the maturity date / final redemption date will depend upon the confirmations to be received from depository(ies) on which the Mutual Fund has no control.

- As the Units allotted under respective Plan(s) of the Scheme will be listed on the Exchange(s), the Mutual Fund shall not provide for redemption / repurchase of Units prior to maturity / final redemption date of the respective Plan(s).

(ix) Risk factors associated with processing of transaction through Stock Exchange Mechanism

The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognised stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing /settlement, etc. upon which the Fund has no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s).

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The individual Plan(s) under the Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Plan(s). These conditions will be complied with immediately after the close of the NFO itself i.e. at the time of allotment. In case of non-fulfillment with the condition of minimum 20 investors, the Plan(s) shall be wound up in accordance with Regulation 39 (2) (c) of SEBI (MF) Regulations automatically without any reference from SEBI. In case of non-fulfillment with the condition of 25% holding by a single investor on the date of allotment, the application to the extent of exposure in excess of the stipulated 25% limit would be liable to be rejected and the allotment would be effective only to the extent of 25% of the corpus collected. Consequently, such exposure over 25% limits will lead to refund within 5 Business Days from the date of closure of the New Fund Offer.

Such changes in the investment pattern will be for short term and for defensive consideration only.

In the event of the asset allocation falling outside the limits specified in the asset allocation table, the Fund Manager will review and rebalance the same within 30 days.

The following table gives approximate yields prevailing during the month of November 2013 on some of the instruments. These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macro economic conditions and RBI policy.

Generally, for instruments issued by a non-Government entity (corporate / PSU bonds), the yield is higher than the yield on a Government Security with corresponding maturity. The difference, known as credit spread, depends on the credit rating of the entity.

Overseas Debt Market

The nature and number of debt instruments available in international debt markets is very wide. In terms of diverse instruments as well as liquidity, overseas debt markets offer great depth and are extremely well developed.

Investment in international debt greatly expands the universe of top quality debt, which is no longer restricted to the limited papers available in the domestic debt market. The higher rated overseas sovereign, quasi-government and corporate debt offer lower default risk in addition to offering a high degree of liquidity since these are traded across major international markets. Investments in rated international debt offer multiple benefits of risk reduction, a much wider universe of top quality debt and also potential gains from currency movements.

Investments in international markets are most often in U.S. dollars, though the Euro, Pound Sterling and the Yen are also major currencies. Though this market is geographically well-spread across global financial centres, the markets in the U.S., European Union and London offer the most liquidity and depth of instruments.

Besides factors specific to the country / issuer, international bond prices are influenced to a large extent by a number of other factors; chief among these are the international economic outlook, changes in interest rates in major economies, trading volumes in overseas markets, cross currency movements among major currencies, rating changes of countries / corporations and major political changes globally.

The approximate yields to maturity in the US Bond Market are as follows:

Maturity	US Treasury yields (%) (As at November 29, 2013)
3 months	0.28
6 months	0.32
2 years	0.69
3 years	1.03
5 years	1.85
10 years	3.40

• Trading in Derivatives

The Scheme may take derivatives position based on the opportunities available subject to the guidelines provided by SEBI from time to time and in line with the overall investment objective of the Scheme. The Fund will comply with the prescribed disclosure requirements. Derivatives positions may be taken to hedge the portfolio, rebalance the same or to undertake any other strategy as permitted under SEBI (MF) Regulations from time to time. Hedging does not mean maximisation of returns but only reduction of systematic or market risk inherent in the investment. The Scheme intends to take position in derivative instruments like Futures, Options, Interest Rate Swaps, Forward Rate Agreements, and such other derivative instruments as may be permitted by SEBI from time to time. In order to protect the interest of the Unitholders, the maximum derivative position will be restricted as mentioned under section 'HOW WILL THE SCHEME ALLOCATE ITS ASSETS?' on Page 14.

Derivatives can be traded over the exchange or can be structured between two counter-parties. Those transacted over the exchange are called Exchange Traded derivatives whereas the other category is referred to as OTC (Over the Counter) derivatives.

Some of the differences of these two derivative categories are as under:

Exchange traded derivatives: These are quoted on the exchanges like any other traded asset class. The most common amongst these are the Index Futures, Index Options, Stock Futures and Options on individual equities / securities. The basic form of the futures contract is similar to that of the forward contract, a futures contract obligates its owner to purchase a specified asset at a specified exercise price on the contract maturity date. Futures are cash-settled and are traded only in organised exchanges. Exchange traded derivatives are standardised in terms of amount and delivery date. Standardisation and transparency generally ensures a liquid market together with narrower spreads. On the other hand, for delivery dates far in the future, there may be insufficient liquidity in the futures market whereas an OTC price may be available.

OTC derivatives: OTC derivatives require the two parties engaging in a derivatives transaction to come together through a process of negotiation. It is a derivative that is customised in terms of structure, amount, tenor, underlying assets, collateral etc. Some of the common

examples are interest rate and currency swaps, Forward Rate Agreements (FRAs) etc.

• Interest Rate Swaps (IRS)

All swaps are financial contracts, which involve exchange (swap) of a set of payments owned by one party for another set of payments owned by another party, usually through an intermediary (market maker). An IRS can be defined as a contract between two parties (Counter Parties) to exchange, on particular dates in the future, one series of cash flows, (fixed interest) for another series of cashflows (variable or floating interest) in the same currency and on the same principal for an agreed period of time. The exchange of cashflows need not occur on the same date.

It may be noted that in such hedged positions (fixed v/s floating or vice versa), both legs of the transactions have interest rate volatility as underlying.

• Forward Rate Agreements (FRA)

A FRA is an agreement between two counter parties to pay or to receive the difference between an agreed fixed rate (the FRA rate) and the interest rate prevailing on a stipulated future date, based on a notional amount, for an agreed period. In short, in a FRA, interest rate is fixed now for a future period. The special feature of FRAs is that the only payment is the difference between the FRA rate and the Reference rate and hence are single settlement contracts. As in the case of IRS, notional amounts are not exchanged.

E. WHAT ARE THE INVESTMENT STRATEGIES? INVESTMENT STRATEGIES AND RISK CONTROL

The Scheme seeks to generate returns by investing in a portfolio of debt and money market instruments which mature on or before the date of maturity of the Scheme. The Scheme also seeks to invest a portion of the portfolio in equity and equity related instruments to achieve capital appreciation. In line with the Investment Objective of the Scheme, deployment of the proceeds collected during the NFO shall be made as under:

- (a) The respective Plan(s) under the Scheme shall invest the entire NFO proceeds in the Money Market instruments and Bank Fixed Deposits in accordance with the Asset Allocation Pattern till the time appropriate Equity instruments and / or Debt Instruments and Government Securities maturing on or before the maturity date of the respective Plan(s) are available.
- (b) The portfolio of the respective Plan(s) shall be constructed by investing in the following:
 - Highest rated Debt instruments, Money Market instruments and Government Securities maturing on or before the maturity date of the respective Plan(s).
 - **Equity and equity related instruments:** The respective Plan(s) under the Scheme shall invest in either of the following instruments or a combination thereof:
 - **Direct Equity:** Investments may be made in stocks or through futures of a cross-section of companies across major industries and economic sectors through active management.
 - **Equity Options:** The Plan(s) may take equity exposure through equity call options maturing on or before the maturity date of the respective Plan(s).
- (c) The respective Plan(s) under the Scheme may seek investment opportunity in the ADR / GDR / Foreign equity and debt securities, in accordance with guidelines stipulated in this regard by SEBI and RBI from time to time.

The portfolio would be altered from time to time keeping in view market conditions, market opportunities, applicable regulations and political, economic factors and review by rating agency.

The Scheme is "oriented towards protection of capital" and "not with guaranteed returns". The Scheme does not guarantee any returns. The orientation towards protection of capital originates from the

structure of the debt Portfolio of the Scheme and not from any Bank guarantee, Insurance Cover etc. There is no assurance that the structure would provide the necessary protection of capital.

Though every endeavor will be made to achieve the objectives of the Scheme, the AMC/Sponsors/Trustees do not guarantee that the investment objectives of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme.

Risk Control

Investments made from the net assets of the respective Plan(s) would be in accordance with the investment objective of the Scheme and the provisions of the SEBI (MF) Regulations. The AMC will strive to achieve the investment objective by way of a judicious portfolio mix comprising of Debt and Money Market Instruments and equity/ equity related instruments. Every investment opportunity in Debt and Money Market Instruments would be assessed with regard to credit risk, interest rate risk and liquidity risk.

Credit Evaluation Policy

The credit evaluation policy of the AMC entails evaluation of credit fundamentals of each investment opportunity. Some of the factors that are evaluated inter-alia may include outlook on the sector, parentage, quality of management, and overall financial strength of the credit. The AMC utilises ratings of recognised rating agencies as an input in the credit evaluation process. Investments in bonds and debenture are usually in instruments that have been assigned high investment grade ratings by a recognized rating agency.

Interest Rate Risk

An interest rate scenario analysis would be performed on an ongoing basis, considering the impact of the developments on the macro-economic front and the demand and supply of funds. Based on the above analysis, the AMC would manage the investments of the Scheme on a dynamic basis to exploit emerging opportunities in the investment universe and manage risks at all points in time.

Liquidity Risk

The AMC will attempt to reduce liquidity risk by investing in securities that would result in a staggered maturity profile of the portfolio, investment in securities that provide easy liquidity and securities that have reasonable secondary market activity.

Concentration Risk

The AMC will mitigate this risk by investing in sufficiently large number of issuers spread across the financial and manufacturing/services sectors so as to maintain optimum diversification and keep issuer/ sector specific concentration risk relatively low.

Strategies for investment in Derivatives

Basic Structure of an Index Future

Index Futures are instruments designed to give exposure to the equity market indices. BSE Limited and the National Stock Exchange of India Limited have started trading in index futures of 1, 2 and 3 month maturities. The pricing of an index future is the function of the underlying index and short term interest rates.

Example:

Assumptions:

1 month BSE 30 Future
Spot Index: 4900
Future Price on day 1: 4920
Fund buys 10,000 futures contracts

On Date of settlement

Future price = Closing spot price = 4950
Profits for the Fund = (4950-4920)*10000 = Rs.300,000 + interest for the 1 month period

Please note that the above example is given for illustration purposes only.

The net impact for the Fund will be in terms of the difference between the closing price of the index and cost price (ignoring margins for the sake of simplicity) plus interest costs on funds that would otherwise be invested in stocks comprising the index. The risks associated with index futures are similar to those associated with equity investments. Additional risks could be on account of illiquidity and/or mis pricing of the future at any time during the life of the contract.

The strategies below are given for illustration purposes only. Some of the strategies involving derivatives that may be used by the Investment Manager, with a aim to protect capital and enhance returns include:

Example:

The scheme has a corpus of Rs.50 crore and there is an inflow of Rs.5 crore in a day. The AMC may buy index futures contracts of a value of Rs.5 crore. Later as the money is deployed in the underlying equities, the value of the index futures contracts can be suitably reduced.

Portfolio	Event	Equity Portfolio Gain / (Loss) (Rs.in crore)	Derivative Gain / (Loss) (Rs.in crore)	Total Portfolio Gain / (Loss) (Rs.in crore)
Rs.50 Crore Equity exposure	10% rise in equity prices	5	Nil	5
Rs.50 Crore Equity exposure + Rs.5 Crore long position index futures	10% rise in equity prices	5	0.5	5.5
Rs.50 Crore Equity exposure	10% fall in equity prices	(5)	Nil	(5)
Rs.50 Crore Equity exposure + Rs.5 Crore long position index futures	10% fall in equity prices	(5)	(0.5)	(5.5)

RISKS

- The strategy of taking a long position in index futures increases the exposure to the market. The long position is positively correlated with the market. However, there is no assurance that the stocks in the portfolio and the index behave in the same manner and thus this strategy may not provide gains perfectly aligned to the movement in the index.
- The long position will have as much loss / gain as in the underlying index. e.g. if the index appreciates by 10%, the index future value rises by 10%. However, this is true only for futures contracts held till maturity. In the event that a futures contract is closed out before its expiry, the quoted price of the futures contract may be different from the gain / loss due to the movement of the underlying index. This is called the basis risk.
- While futures markets are typically more liquid than the underlying cash market, there can be no assurance that ready liquidity would exist at all points in time, for the Scheme to purchase or close out a specific futures contract.

Strategy Number 2

■ Downside Protection Using Stock Put

As a stock hedging strategy, the purchase of a put option on an underlying stock held would lead to a capping of the loss in value of the stock in the event of a material decline in the stock's price.

The purchase of a put option against a stock holding in the scheme gives the scheme the option of selling the stock to the writer of the put at the predetermined level of the Put Option, called the strike price. If the stock falls below this level, the downside for the scheme is protected as it has already locked into the selling price. In case of a fall in the stock's price below the strike price, the value of the Put Option appreciates, approximately corresponding to the extent of the stock's price fall below the strike price.

Example:

Let us assume 20000 shares of XYZ Limited held in the portfolio with a market value of Rs. 1000 per share (overall

Strategy Number 1

■ Using Index Futures to increase percentage investment in equities

This strategy will be used for the purpose of generating returns on idle cash, pending its investment in equities.

The Scheme is subject to daily flows. There may be a time lag between the inflow of funds and their deployment in stocks. If so desired, the scheme would be able to take immediate exposure to equities via index futures. The position in index futures may be reversed in a phased manner, as the funds are deployed in the equity markets.

Rs.2 crores). The scheme purchases put options on the stock of XYZ Limited (not exceeding its holding of 20000 shares) with a strike price of Rs.990 for an assumed cost (called Option Premium) of Rs.15 per share (Rs.3 lakhs for 20000 shares).

By purchasing the above Put Option, the scheme has effectively set a floor to the realisation from the stock at Rs.975 per share (Rs.990 strike price less Rs.15 Option Premium paid).

In case the stock price of the company falls below Rs.975 per share, the gain in the price of the Put Option when added to the actual market price of the stock would bring the sale realisation per share close to Rs.975 per share.

After purchasing the above Put Option, in case the price of the stock appreciates, remains around Rs.1000 or declines slightly to remain above the strike price, the scheme may not avail of the option and the cost for having bought the option remains fixed at Rs.15 per share.

In effect, a floor (in this case effectively Rs.975) is set to the stock by buying an Option at a cost that is known (in this case Rs.15 per share).

RISKS

- There can be no assurance that ready liquidity would exist at all points in time, for the scheme to purchase or close out a specific options contract.
- A hedging strategy using Put Options is a perfect hedge on the expiration date of the put option. On other days, there may be (temporary) imperfect correlation between the share price and the put option.

In terms of Circular No. MFD.BC.191/07.01.279/1999-2000 and MPD.BC.187/07.01.279/1999-2000 dated November 1, 1999 and July 7, 1999 respectively issued by Reserve Bank of India permitting participation by Mutual Funds in Interest Rate Swaps and Forward Rate Agreements. These products were introduced for deepening the country's money market. The Scheme may trade in these instruments for the purpose of hedging and portfolio balancing or to undertake any other strategy as permitted under SEBI (MF) Regulations from time to time. SEBI has also permitted trading of interest rate derivatives through Stock Exchange.

Basic Structure of a Swap

Assume that the Scheme has a Rs.20 crore floating rate investment linked to MIBOR (Mumbai Inter Bank Offered Rate). Hence, the Scheme is currently running an interest rate risk and stands to lose if the interest rate moves down. To hedge this interest rate risk, the Scheme can enter into a 6 month MIBOR swap. Through this swap, the Scheme will receive a fixed predetermined rate (assume 12%) and pays the “benchmark rate” (MIBOR), which is fixed by the National Stock Exchange of India limited (NSE) or any other agency such as Reuters. This swap would effectively lock-in the rate or 12% for the next 6 months, eliminating the daily interest rate risk. This usually routed through an intermediary who runs a book and matches deals between various counterparties.

The steps will be as follows -

- Assuming the swap is for Rs.20 crore June 1, 2013 to December 1, 2013. The Scheme is a fixed rate receiver at 12% and the counterparty is a floating rate receiver at the overnight rate on a compounded basis (say NSE MIBOR).
- On June 1, 2013 the Scheme and the counterparty will exchange only a contract of having entered this swap. This documentation would be as per International Swap Dealers Association (ISDA).
- On a daily basis, the benchmark rate fixed by NSE will be tracked by them.

On December 1, 2013 they will calculate the following-

- The Scheme is entitled to receive interest on Rs.20 crore at 12% for 184 days i.e. Rs.1.21 crore, (this amount is known at the time the swap was concluded) and will pay the compounded benchmark rate.
- The counterparty is entitled to receive daily compounded call rate for 184 days & pay 12% fixed.
- On December 1, 2013, if the total interest on the daily overnight compounded benchmark rate is higher than Rs.1.21 crore, the Scheme will pay the difference to the counterparty. If the daily compounded benchmark rate is lower, then the counterparty will pay the Scheme the difference.
- Effectively the Scheme earns interest at the rate of 12% p.a. for six months without lending money for 6 months fixed, while the counterparty pays interest @ 12% p.a. for 6 months on Rs.20 crore, without borrowing for 6 months fixed.

The above example illustrates the benefits and risks of using derivatives for hedging and optimizing the investment portfolio. Swaps have their own drawbacks like credit risk, settlement risk. However, these risks are substantially reduced as the amount involved is interest streams and not principal.

Forward Rate Agreement

Assume that on April 30, 2013, the 30 day commercial paper (CP) rate is 5.75% and the Scheme has an investment in a CP of face value Rs.25 crores, which is going to mature on May 30, 2013. If the interest rates are likely to remain stable or decline after May 30, 2013, and if the fund manager, who wants to re-deploy the maturity proceeds for 1 more month, does not want to take the risk of interest rates going down, he can then enter into a following forward rate agreement (FRA) say as on April 30, 2013:

He can receive 1 X 2 FRA on April 30, 2013 at 5.75% (FRA rate for 1 months lending in 2 months time) on the notional amount of Rs.25 crores, with a reference rate of 30 day CP benchmark. If the CP benchmark on the settlement date i.e. May 30, 2013 falls to 5.50%, then the Scheme receives the difference 5.75 - 5.50 i.e. 25 basis points on the notional amount Rs.25 crores for 1 month. The maturity proceeds are then reinvested at say 5.50% (close to the benchmark). The scheme, however, would have locked in the rate prevailing on

April 30, 2013 (5.75%) as it would have received 25 basis points more as settlement amount from FRA. Thus the fund manager can use FRA to mitigate the reinvestment risk.

In this example, if the rates move up by 25 basis points to 6% on the settlement date (May 30, 2013), the Scheme loses 25 basis points but since the reinvestment will then happen at 6%, effective returns for the Scheme is unchanged at 5.75%, which is the prevailing rate on May 30, 2013.

Risk Factors of SWAP and Forward Rate Agreement

- **Credit Risk:** This is the risk of defaults by the counterparty. This is usually negligible, as there is no exchange of principal amounts in a derivative transaction.
- **Market Risk:** Market movements may adversely affect the pricing and settlement derivatives.
- **Liquidity Risk:** The risk that a derivative cannot be sold or purchased quickly enough at a fair price, due to lack of liquidity in the market.

- The respective Plan(s) shall follow a passive investment strategy for the fixed income component.
- Active trading in debt instruments can be done only if the additional yield on the new instruments, with the same residual tenor as the original instrument, more than compensates for the impact cost incurred on selling the original security or to liquidate instruments whose credit quality has gone below [ICRA]AAA equivalent.
- Derivatives investments shall include buying options (calls or puts) where the amount of premium would be limited to the extent of funds available for allocation to Equity and Equity related instruments.

The AMC/Trustee may from time to time alter these restrictions in conformity with the SEBI (MF) Regulations. Further, apart from the investment restrictions prescribed under SEBI (MF) Regulations, the Fund may follow any internal norms vis-à-vis limiting exposure to a particular scrip or sector, etc.

Settlement of Purchase/Sale of Units of the Scheme on NSE / BSE

Buying/Selling of Units of the Scheme on NSE / BSE is just like buying/selling any other normal listed security. If an investor has bought Units, an investor has to pay the purchase amount to the broker/sub- broker such that the amount paid is realized before the funds pay-in day of the settlement cycle on the NSE / BSE. If an investor has sold Units, an investor has to deliver the Units to the broker/sub-broker before the securities payin day of the settlement cycle on the NSE / BSE . The Units (in the case of Units bought) and the funds (in the case of Units sold) are paid out to the broker on the pay-out day of the settlement cycle on the NSE / BSE. The NSE / BSE regulations stipulate that the trading member should pay the money or Units to the investor within 24 hours of the pay-out.

If an investor has bought Units, he should give standing instructions for ‘Delivery-In’ to his/her DP for accepting Units in his/her beneficiary account. An investor should give the details of his/her beneficiary account and the DP-ID of his/her DP to his/her trading member. The trading member will transfer the Units directly to his/her beneficiary account on receipt of the same from NSE’s Clearing Corporation / BSE’s Clearing Corporation.

An investor who has sold Units should instruct his/her Depository Participant (DP) to give ‘Delivery Out’ instructions to transfer the Units from his/her beneficiary account to the Pool Account of his/her trading member through whom he/she have sold the Units. The details of the Pool A/C (CM-BP-ID) of his/her trading member to which the Units are to be transferred, Unit quantity etc. should be mentioned in the Delivery Out instructions given by him/her to the DP.

The instructions should be given well before the prescribed securities pay-in day. SEBI has advised that the Delivery Out instructions should be given at least 24 hours prior to the cutoff time for the prescribed securities pay-in to avoid any rejection of instructions due to data entry errors, network problems, etc.

Rolling Settlement

As per the SEBI’s circular dated March 4, 2003, the rolling settlement on T+2 basis for all trades has commenced from April 1, 2003 onwards. The Pay-in and Pay-out of funds and the Units will take place 2 working days after the trading date.

The pay-in and pay-out days for funds and securities are prescribed as per the Settlement Cycle. A typical Settlement Cycle of Rolling Settlement is given below:

D. COMPUTATION OF NAV

The Net Asset Value (NAV) per Unit of the respective Plan(s) under the Scheme will be computed by dividing the net assets of the Plan(s) by the number of Units outstanding under the Plan(s) on the valuation date. The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

NAV of Units of under each Plan shall be calculated as shown below:

$$\text{NAV (Rs.) per Unit} = \frac{\text{Market or Fair Value of the Plan's Investments} + \text{Current Assets} - \text{Current Liabilities and Provisions}}{\text{No. of Units outstanding under each Plan}}$$

The AMC will calculate and disclose the first NAV of the Plan(s) not later than 5 Business days from the allotment of Units of the respective Plan(s). Subsequently, the NAV of the Plan(s) will be calculated and disclosed at the close of every Business Day.

Each Plan will be managed as a separate investment Portfolio. Separate NAV will be calculated and announced for each of the

Options of the respective Plan(s) at the close of every Business Day. The NAVs will be calculated upto 4 decimals.

There are no specific SEBI guidelines on valuation of foreign securities at present. In the absence of any guidelines, the following policy will be followed:

The security issued outside India and listed on the stock exchanges outside India shall be valued at the closing price on the stock exchange at which it is listed. However in case a security is listed on more than one stock exchange, the AMC reserves the right to determine the stock exchange, the price of which would be used for the purpose of valuation of that security. Any subsequent change in the reference stock exchange used for valuation will be backed by reasons for such change being recorded in writing by the AMC. Further in case of extreme volatility in the overseas markets, the securities listed in those markets may be valued on a fair value basis.

If a significant event has occurred after security prices were established for the computation of NAV of the Scheme, the AMC reserves the right to value the said securities on fair value basis.

When on a particular valuation day, a security has not been traded on the selected stock exchange; the security will be valued in accordance

with SEBI guidelines applicable for security listed in India.

In case of investment in foreign debt securities, on the Valuation Day, the securities shall be valued in line with the valuation norms specified by SEBI for Indian debt securities. However, in case valuation for a specific debt security is not covered by SEBI (MF) Regulations, then the security will be valued on fair value basis.

Due to difference in time zones of different markets, closing price of overseas securities/ units of overseas mutual fund may be available only after the prescribed time limit for declaration of NAV in India. In such cases, the NAV of the Scheme for any Business Day (T day) will be available on the next Business Day (T+1 day) and the same shall be posted, on each Business Day, on the Fund's website and on the AMFI website - www.amfiindia.com on date of computation of NAV.

On the Valuation Day, all assets and liabilities denominated in foreign currency will be valued in Indian Rupees at the exchange rate available on Bloomberg / Reuters / RBI at the close of banking hours in India. The Trustees reserve the right to change the source for determining the exchange rate.

The exchange gain / loss resulting from the aforesaid conversion shall be recognized as unrealized exchange gain / loss in the books of the Scheme on the day of valuation.

Further, the exchange gain / loss resulting from the settlement of assets / liabilities denominated in foreign currency shall be recognized as realized exchange gain / loss in the books of the scheme on the settlement of such assets / liabilities.
